

# *myMotionLED*

## Setup Guide

- 1) Stretch out the four (4) LED light strips on the floor so they can be easily viewed when lighted. Plug the 110v power cord into the 5VDC power supply.

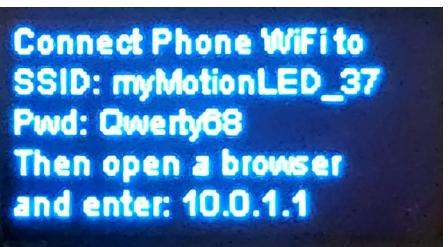

- 2) Plug the 5VDC/15A power jack into the *myMotionLED* control box then plug the 110V power cord into a wall plug.

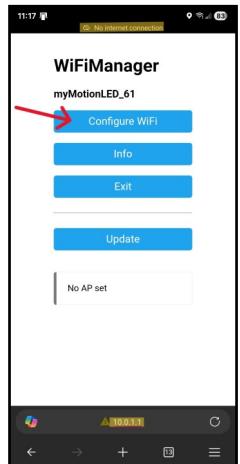

- 3) The oLED screen should now be displaying instruction to connect your phone to the devices captive portal so you can connect it to your WIFI.

- 4) Connect your phones WIFI (*or tablet*) to the SSID displayed on the screen using the password **Qwerty68**. You may receive a message on your phone "No Internet", click "Always Connect".

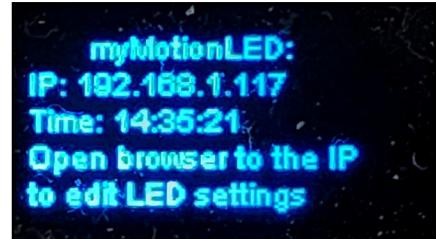

- 5) Once your phone is connected to the *myMotionLED* WIFI open a browser and enter **10.0.1.1** in the address bar then press enter. When the page loads click on "**Configure WIFI**".

- 6) You'll see a list of available WIFI connections (*WIFI4 Only*) in your environment which you can connect your *myMotionLED* device to. Touch to select your WIFI SSID, enter the password for your WIFI, touch "**Save**". The device will now encrypt and save the credentials, reboot and connect to your WIFI.  
*You may have to reconnect your phone to your WIFI.*

- 7) Look at the *myMotionLED* screen for it's new IP. Open a browser, enter the IP and press enter. Now you can fully control your LED lights.

- 8) On the *myMotionLED* app portal you can select which light effect, brightness, speed etc. as well as enable or disable the scheduler if you want the device to turn on/off daily at specific times. *The only connection to the internet by this device is to get the current time.*
